

GANPAT UNIVERSITY
M. TECH. SEM. – I COMPUTER ENGINEERING/INFORMATION TECHNOLOGY
REGULAR EXAMINATION JAN - 2013
3CE103/3IT103: COMPUTER ALGORITHMS

TIME:-3 HOURS]

[TOTAL MARKS: 70

Instructions:

1. Figures to the right indicate full marks.
2. Each section should be written in a separate answer book.
3. Be precise and to the point in your answer.

SECTION – I

- Q – 1 (A)** Construct the Huffman code using greedy algorithm for following [2]
 frequency table
 A:90, B:7, C:3, D:5, E:6, F:50, G:20
- (B)** Apply minimum finish time first, minimum starting time first and [4]
 minimum interval first strategy on following Intervals and give your
 conclusion in term of which strategy returns optimal answer. Also mention
 time complexity for each strategy.
 I_1 (2-3), I_2 (0-5), I_3 (3-5), I_4 (5-7), I_5 (8-9), I_6 (4-6), I_7 (7-9), I_8 (1-10).

- (C)** Show overlapping of sub problem in recursive Fibonacci algorithm. Also [6]
 write dynamic programming version of generating n^{th} Fibonacci number.

OR

- Q – 1 (A)** What is memoization? Explain memoized version of Binomial Coefficient. [6]
(B) Prove that Vertex-Cover \equiv_p Independent-Set [6]
- Q – 2 (A)** What is Clique in graph? Show that Clique of a graph is a NP problem. [5]
(B) Explain the case where greedy algorithm fails for making change problem. [6]
 Also construct the dynamic programming table to give change of 10 with
 coins of denomination 1, 3, 5, and 7. Mention the conditions used to fill up
 the table.

OR

- Q – 2 (A)** What is Hamiltonian cycle? Show that Hamiltonian cycle is a NP problem. [5]
(B) Write best case recurrence relation of Quick sort. Show the working of [6]
 Quick sort on following input instance. Also mention nature of the input
 (i.e. Best Case, Worst Case, Average Case)
 10,15, 20, 84, 11, 59, 64, 3, 54

- Q – 3 (A)** Apply Prim's Algorithm on graph given in fig A (on page 3) and give [6]
 minimum spanning tree. Also write the time complexity of Prim's
 algorithm.
- (B)** Draw the DFS and BFS tree for graph given in fig A (neglect the weight of [6]
 edges). Also mention time complexity of both techniques.

SECTION - II

Q-4 (A) Let $t_A(n)$ and $t_B(n)$ denote the running times of two programs A and B [4]
respectively. For following pairs find the value of n for which program A is faster
than program B.

1.) $t_A(n) = 4n^3$, $t_B(n) = n^4$ 2.) $t_A(n) = 100n$, $t_B(n) = 2n^3$

(B) Prove followings: [8]

1. $(n+a)^b = O(n^b)$ 2. $(1/2)n^2 - 3n = O(n^2)$ 3. $\text{Log}(\sqrt{n}) = O(\log n)$

OR

Q-4 (A) Analyze following algorithm for its Best case and Worst case time complexity [6]
using tabular method. Represent the time complexity by Theta (Θ) notation.

Algorithm SelectionSort (a, n)

//Here 'a' is the array having 'n' number of data

```

{
1.   for i:= 1 to n do{
2.       for j:= i+1 to n do{
3.           if (a[i]>=a[j])
4.               swap(a[i],a[j]); }
}

```

(B) Explain the following terms with graph: [6]

1. Big-oh notation. 2. Omega notation. 3. Theta notation.

Q-5 Solve following recurrence relations and express your answer using big-oh (O) notation.

(A) $T(n) = T(n/2) + n^2$ [3]

(B) $T(n) = 3T(n/4) + \Theta(n^2)$ Use recurrence tree method only. [4]

(C) $T(n) = T(n-1) + n^2$ [4]

OR

Q-5 (A) Solve following recurrence relations and express your answer using big-oh [5]
(O) notation.

1.) $t_n = n$;if $n \leq 1$
 $= 4t_{n-1} - 4t_{n-2} + 3^n$;Otherwise

2.) $T(n) = 4T(n/4) + n$

(B) Write the recurrence relation (use tabular method) for following algorithm [6]
and solve it to represent complexity using Bog-oh (O) notation.

Algorithm Factorial (n) {

//this algorithm returns the factorial of number 'n'

```

1.   if (n=0 or n=1)
2.       return 1;
     else
3.       return (n*factorial(n-1)); }

```
